Project Main Idea

National Parks Builder is a gaming application that allows users to build and manage a private national park from scratch.

Users have an option of picking an undeveloped land from a current National Park's location.

Then the user would be in charge of rebuilding the park and deciding where features of the park would go.

Once the user has built their initial design, then they will be in charge of the management aspects of running a National Park.

Features

This **game** would allow you to play and compete with your friends to see who can build and manage the better National Park.

Users will eventually put tons of hours into this application because every time they enter the game they receive revenue from being offline from their virtual park.

And now the demo!

Try it yourself:
